

Visible & Ultraviolet Spectroscopy

R.C. DENNEY, Thames Polytechnic, London, UK and R. SINCLAIR, Paisley College of Technology, Scotland

Provides a knowledge of the theory and practice of ultraviolet/visible spectrometry for both qualitative and quantitative chemical analysis. Enables the non-specialist to acquire sufficient knowledge about the scientific rules, techniques, procedures and equipment used in order to appreciate its role and value as an analytical tool.

0471913782 (cl) 216pp December 1987 £28.50/\$60.00
0471913790 (pr) 216pp December 1987 £9.95/\$20.95

Measurement, Statistics & Computation

D. McCORMICK, Manchester Polytechnic, UK and A. ROACH, Paisley College of Technology, UK

One feature common to all analytical methods is the need for interpretation of the results, usually in a quantifiable way. This book introduces those aspects of statistics and measurement science which help analytical chemists to produce meaningful results.

0471913669 (cl) 784pp December 1987 £48.50/\$105.00
0471913677 (pr) 784pp December 1987 £19.50/\$40.95

Advances in Non-Linear Spectroscopy

Volume 15

Edited by R.J.H. CLARK, University College London and R.E. HESTER, University of York, UK

Provides an up-to-date survey of the key developments in, and applications of, non-linear spectroscopy. Authoritative reviews are used to bring together different branches of both academic and industrial research.

0471916528 384pp January 1988 £70.00/\$150.00

Spectroscopy of Surfaces

Volume 16

Edited by R.J.H. CLARK, University College, London and R.H. HESTER, University of York, UK

Provides an up-to-date set of reviews of spectroscopic techniques which constitute some of the most powerful and informative methods for the characterization of structure and dynamics of surfaces. These include mass spectrometry and both electron and optical spectroscopy.

0471918954 approx 480pp July 1988 £90.00/\$190.00

Practical HPLC

Dr VERONIKA MEYER, Universität Bern, Institute für Organische Chemie, Switzerland

Provides the user of HPLC with all the information necessary to make best use of the technique, and gives critical assessment of potential problems and how to overcome these. Any laboratory using HPLC will find this book an invaluable manual.

0471911402 336pp July 1988 £29.50/\$70.00

Advances in Applied Fourier Transform Infrared Spectroscopy

Edited by M.W. MACKENZIE, ICI, Wilton, UK

Practical guide giving a wide range of applications and examples of the use of FTIR. This is a technique which is growing in importance and is valuable for many industries. Contributions are from the UK, Europe and the USA and give an international view of applications.

0471920347 approx 350pp October 1988 approx £37.50/\$75.00

Gas and Liquid Chromatography in Analytical Chemistry

R.M. SMITH, Department of Chemistry, University of Technology, Loughborough, UK

Comprehensive introduction to the practice and applications of modern instrumental gas and liquid chromatography, for use in industrial and research laboratories. Intended for the practising chromatographer who needs to know enough of the technique to assess which method to use and to critically evaluate different techniques.

0471909807 approx 480pp June 1988 approx £60.00/\$130.00

Proton-Induced X-Ray Emission

A Novel Technique for Elemental Analysis

S.A.E. JOHANSSON, Department of Nuclear Physics, The University of Lund, Sweden, and J.L. CAMPBELL, Department of Physics, The University of Guelph, Ontario, Canada

Overview of Proton-Induced X-Ray Emission (PIXE), a new analytical technique which is of growing importance for a number of applications, including the biological, environmental, medical, geological and art fields. The two final chapters, one on PIXE in relation to other analytical techniques, and the other on future potential will be particularly important to anyone considering making use of the technique. References are cited to assist those who wish to follow up specific aspects in more depth.

0471920118 approx 344pp due August 1988 approx £42.50/\$100.00

Theory and Methods of Calculation of Molecular Spectra

L.A. GRIBOV, Vernadsky Institute of Geochemical and Analytical Chemistry, USSR Academy of Sciences, Moscow, USSR and W.J. ORVILLE-THOMAS, University of Salford, UK

Discusses the theory and methods of calculation of electronic, electronic-vibrational and vibrational spectra of large molecules in detail. Only those methods of calculation which are particularly suitable for computer solution and are needed for preparing special artificial intelligence systems for the investigation of molecules are described. Many new problems are examined and special attention is paid to inverse spectral problems.

0471918822 approx 664pp August 1988 approx £85.00/\$180.00

Chemical Information

A Practical Guide to Utilization

2nd Edition

Y. WOLMAN, Department of Organic Chemistry, The Hebrew University, of Jerusalem, Israel

Reflects the rapid changes and developments that have taken place in the area of chemical information during the last 5 or 6 years. The basic principles and applications of expert systems and trends and perspectives in chemical information are among the topics covered.

0471917044 approx 300pp due June 1988 approx £14.95/\$31.50

1988 International Conference on Raman Spectroscopy

Edited by R.J.H. CLARK, University College, London and D.A. LONG, University of Bradford Yorkshire, UK

Contains the texts of the plenary lectures and contributed papers presented at the Eleventh International Conference on Raman Spectroscopy. This is the biggest international raman conference in the world and the proceedings provide a substantial, broadly based and up to date review within this rapidly developing area.

0471920940 approx 1096pp December 1988 approx £57.50/\$135.00

Petroanalysis 87

Analytical Developments in the Petroleum Industry Proceedings of the Third Petro Analysis Symposium, University of Lancaster, UK

G.B. CRUMP, Petroleum Standardisation Consultant

Reviews advances made in the development and application of analytical chemistry in the petroleum industry during the last eight years.

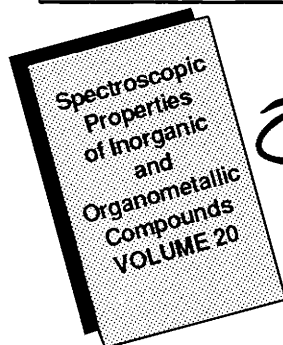

0471919462 approx 500pp June 1988 £50.00/\$115.00

ROYAL SOCIETY OF CHEMISTRY

NEW BOOKS FOR ANALYTICAL CHEMISTS . . .

NEW

Spectroscopic Properties of Inorganic and Organometallic Compounds Vol. 20

"It should definitely be included in the library holdings of all chemistry departments which are attempting to conduct research in the areas of inorganic and organometallic chemistry" – *Journal of the American Chemical Society*, reviewing Vol. 17

This book reviews the recent literature published up to late 1986

Brief Contents:

Nuclear Magnetic Resonance Spectroscopy, Nuclear Quadrupole Resonance Spectroscopy, Rotational Spectroscopy, Characteristic Vibrations of Compounds of Main-group Elements, Vibrational Spectra of Transition-element Compounds, Vibrational Spectra of Some Co-ordinated Ligands, Mossbauer Spectroscopy, Gas-phase Molecular Structures Determined by Electron Diffraction

"... leading experts and specialists in the fields have rendered a unique service to provide critical and in-depth accounts of various areas of research. This monograph would serve the same useful purpose as its co-volumes in this series" – *Medical Book News*, reviewing Vol. 10B

Senior Reporters G Davidson,
University of Nottingham, and E A V
Ebsworth, University of Edinburgh
Specialist Periodical Report (1987)
Hardcover 494pp
ISBN 0 85186 183 0
Price £110.00 (\$216.00)

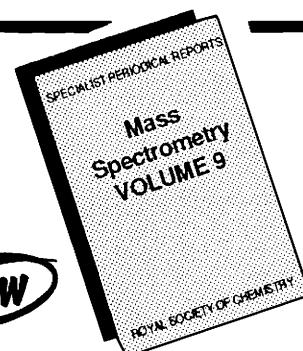

Mass Spectrometry Vol. 9

"The breadth of coverage and extremely comprehensive listing of references makes this book highly recommendable to all mass spectroscopists who wish to remain abreast of current trends in their field. Analytical chemists in general will also find this volume useful in providing an insight into the maze of techniques and methods that make up present-day mass spectrometry" – *Analytical Chimica Acta*, reviewing Vol. 8

This volume reviews the literature published between July 1984 and June 1986

Brief Contents:

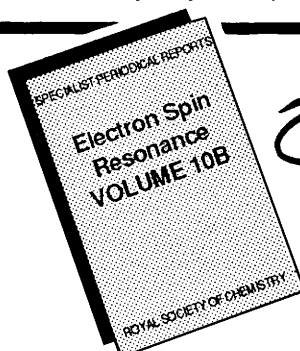

Ionization Processes and Ion Dynamics, Structures and Reactions of Gas-phase Organic Ions, The Chemistry of Gas-phase Ion Clusters, Developments and Trends in Instrumentation, Applications of Computers and Microprocessors in Mass Spectrometry, Reactions of Organic Negative Ions in the Gas Phase, Analysis of Mixtures by Mass Spectrometry, Part I: Developments and New Applications of Gas Chromatography/Mass Spectrometry, Part II: Liquid Chromatography/Mass Spectrometry and Supercritical Fluid Chromatography/Mass Spectrometry, Drug Metabolism, Pharmacokinetics, and Toxicity, Metal-containing and Inorganic Compounds Investigated by Mass Spectrometry, The Current State of Quantitative Metal Analysis by Mass Spectrometry

NEW

Senior Reporter, M E Rose, *Sheffield City Polytechnic*

Specialist Periodical Report (1987)
Hardcover 502pp
ISBN 0 85186 338 8
Price £88.00 (\$171.00)

NEW

Electron Spin Resonance Vol. 11A

Specialist Periodical Reports are a series of review volumes, which provide critical coverage of major areas of research. Electron Spin Resonance is divided into two volumes, 'A' and 'B', which are published in alternate years. The 'A' volume is devoted to organic and bioporganic subjects, and the 'B' volume to inorganic and bio-inorganic subjects. *Electron Spin Resonance Volume 11A* reviews recent literature to mid-1987

Brief Contents:

Organic Radicals in Solution, Theoretical Aspects of ESR, Spin Labels, Biological Membranes, Free Radical Studies in Biology and Medicine, ESR of the Conformation of 5- and 6-Membered Cyclic Nitroxide (Aminoxyl) Radicals

An important feature of this volume is the special chapter on Nitroxide Radicals. It contains many previously unpublished results and will therefore be invaluable to researchers in this field

Senior Reporter: M C R Symons,
University of Leicester
Specialist Periodical Reports (1988)
Hardcover 210pp
ISBN 0 85186 861 4
Price £69.50 (\$139.00)

DIFFUSIVE SAMPLING

**AN ALTERNATIVE APPROACH TO
WORKPLACE AIR MONITORING**

EDITED BY: A. BERLIN, R.H. BROWN, and K.J. SAUNDERS

Diffusive Sampling is based on a symposium held in Luxembourg in September 1986 and organised jointly by the Commission of the European Communities and the United Kingdom Health and Safety Executive in cooperation with the World Health Organization and the Royal Society of Chemistry.

- Reviews the state of the art of diffusive sampler techniques
- Stimulates the exchange of technical information
- Assess the suitability and range of applications for workplace monitoring
- Promotes the further development of this technique and its wider use.

**"LET A LAB TRAIN
TAKE THE STRAIN-
AND SAVE A PACKET!"**

With a little help from British Rail, the Organisers of The British Laboratory Week are once again offering the exceptional "Lab Train" service — which proved outstandingly successful in '87.

Hardly surprising — there couldn't be a more effective (and **COST-effective!**) way of getting to Olympia!

Exclusive InterCity trains, staffed by Organisers' personnel, depart from regional centres and go directly to Kensington Olympia Station, a few yards from the Grand Hall entrance to Lab Week.

No need to cross town. Plenty of time to enjoy a thorough tour of the halls. And the Lab Train will be waiting to whisk you straight home at the end of the day.

And if that's not enough, the cost of tickets is **unbelievable**. Here are the departure points, with the return fare from each.

So let a Lab Train take the strain, and you'll certainly make the most of your professional visit to The British Laboratory Week.

Just complete and return the coupon below, and we'll send you a detailed timetable with departure and return dates and times, together with a ticket reservation form.
